BAZ PILOT 30/90 m³/h - Ø 125 mm

The BAZ PILOT terminal provides ventilation for the dwelling and evacuation of burnt gas from the boiler.

BAZ Pilot

PRODUCT BENEFITS

- delivers ventilation airflow and evacuates burnt gases,
- up to 30% savings on heating energy used: purge losses eliminated, reduced losses on air renewal.
- simple to maintain.

REGLEMENTATIONS AND COMPLIANCES

Technical Opinion no.: 14.5/17-2267

Principles of operation

The terminal is connected to the CMEV system (FRISQUET or SAUNIER DUVAL) and the boiler to deliver ventilation airflow and evacuate burnt gases.

Product description

BAZ PILOT is a self-balanced gas terminal for refurbished multi-occupancy residential buildings. The boiler sends a signal and controls the terminal depending on its state.

Fields of application

Multi-occupancy residential housing, Refurbishment

Installation

- terminal slots into stainless steel sleeve,
- connection to boiler made with Alflex alu for gas,
- connector must be attached to boiler.

Reference arguments

- When connected to CMEV ductwork and to a boiler, the BAZ Pilot terminal provides both ventilation airflow and burnt gas evacuation.
- Depending on its status, the boiler sends a signal to control the BAZ Pilot terminal.

Main characteristics

- the terminal is connected to the CMEV system and the boiler to deliver ventilation airflow and evacuate burnt gases,
- the boiler sends a signal concerning its state to control the terminal.

Installation visual 1

Mise en œuvre BAZ Pilot

Principe de fonctionnement

1. Burner off: the default ventilation airflow no longer passes via the boiler, a specific port on the BAZ Pilot is used, 2. Burner lit: the terminal draws a sufficient airflow through the boiler to remove the burnt gases, 3. Whatever the state of the burner: a push button can be used to activate a peak ventilation airflow drawn over the boiler.
