## Connection sleeve MEA 45 mm

### Product description

- The air inlet connection sleeve makes a junction between the air inlet and the mortise. The mortise can be made in the joinery, in a masonry sleeve or in a roller shutter box.

The MEA 45, MEA 85 and TM are only compatible with indoor insulation. The MEA 160 and MEA 200 are only compatible with outdoor insulation.

- The TM air inlet connection sleeve makes a junction between the air inlet and the mortise. It is used for wall penetrations from 50 to 70 mm.
- The TME extension increases the thickness of the penetration by 20 to 30 mm. The number of extensions can be adapted to the thickness of wall to penetrate.

### Fields of application

Multi-occupancy residential housing, New, Refurbishment

### Installation

N/A

### Reference arguments

The MEA 45 air inlet sleeve serves to make a junction between the air inlet and the mortise through the insulation from indoors only and for a thickness of insulation from 90 to 120 mm.

### Main characteristics

- galvanised steel sheet.
