Connection sleeve TM - White

Product description

- The air inlet connection sleeve makes a junction between the air inlet and the mortise. The mortise can be made in the joinery, in a masonry sleeve or in a roller shutter box.

The MEA 45, MEA 85 and TM are only compatible with indoor insulation. The MEA 160 and MEA 200 are only compatible with outdoor insulation.

- The TM air inlet connection sleeve makes a junction between the air inlet and the mortise. It is used for wall penetrations from 50 to 70 mm.
- The TME extension increases the thickness of the penetration by 20 to 30 mm. The number of extensions can be adapted to the thickness of wall to penetrate.

Fields of application

Multi-occupancy residential housing, New, Refurbishment

Installation

N/A

Reference arguments

Application:

- The wall penetration sleeve for air inlets ensures the continuity of airflow between the mortise penetration (opening) and the air inlet.

Description:

- Used for wall penetrations from 50 to 70 mm,
- White colour.

Main characteristics

- galvanised steel sheet.
