Walter® connected sensor

Walter® is a connected multi-pollutant sensor which measures and manages the air quality inside a dwelling.

PRODUCT BENEFITS

- 4 dedicated sensors to measure the indoor air quality,
- automatic air quality control with an Aldes air purification solution,
- outdoor air quality measured in terms of 4 pollutants via the Aldes Cloud.

Principles of operation

Walter® measures and manages the quality of indoor air. In addition to real-time warnings about air quality, Walter® is also able to automatically boost the ventilation system when high levels of contaminants are reached.

Product description

Walter® is a connected assistant which measures and controls air quality inside an individual house or multi-occupancy residential building. In addition to real-time warnings about air quality, Walter® is also able to automatically boost the ventilation system when high levels of contaminants are reached. Walter® is compatible with Aldes InspirAIR® HRV systems.

Fields of application

Multi-occupancy residential housing, Individual residential housing, New, Refurbishment

Installation

- installed on furniture, powered by the USB cable and transformer supplied,
- installed on wall, 12V DC power supply.

Reference arguments

Application:

- Your connected assistant who measures and controls indoor air quality
- Multi-occupancy residential dwellings treated individually and individual houses
- Description: Walter® informs you of indoor air quality using its 4 pollution detectors:
 - Fine particles (PM25)
 - Volatile Organic Compounds (VOCs)
 - Carbon dioxide (CO2)
 - Temperature and humidity level (°C and H2O). Walter also informs you outdoor air quality using the data it receives from the Aldes Cloud:
 - Fine particles (PM25)
 - Pollen (PM10)
 - Nitrogen dioxide (NO2)
 - Ozone (O3)
- Remote data access via the application AldesConnect™
- Dimensions: 180x132x36

Adapter part

11023470

Walter® connected sensor

Main characteristics

- Walter® provides information on indoor air quality using its 4 pollution sensors:
 - fine particles (PM 2.5),
 - volatile organic compounds (VOC),
 - carbon dioxide (CO₂),
 - temperature and humidity (°C and H₂O).
- Walter® also provides information on outdoor air quality nearby, using the data it receives from the Aldes Cloud:
 - fine particles (PM_{2.5}),
 - pollen (PM₁₀),
 - nitrogen dioxide (NO₂),
 - ozone (O₃).
